EXPERIENCE

**Institute of Mathematical and
Computational Sciences (IMACS),
HCMUT, Vietnam**
Data Science Intern

12/2025 – 3/2026

- Drone positioning in GPS-denied environments using deep learning
- Researched GPS-free drone positioning using deep learning and reproduced results from the paper.
- Supervisor: M.Sc. Nguyễn Văn Gia Thịnh

**Computational Science and
Artificial Intelligence Research
Institute (COSARI), VLU, Vietnam**
Collaborative Research

7/2024 – Present

- Time Series Optimization
- Developed optimal scheduling algorithms for single/multi-machine settings and built a Python library implementing the algorithms.
- Collaborative research with Ho Chi Minh City University of Technology (HCMUT).
- Supervisors: Dr. Lê Minh Huy (VLU), Dr. Trần Thanh Hiệp (HCMUT)

PROJECTS

ScheLoc (11/2025 – Present): Optimize transport time using geographic and time-series data.

- Combined geographic data with time-series data to optimize transport and delivery schedules.
- Discrete Optimization Research Group, Can Tho University, Vietnam
- GitHub: *link forthcoming*

DayPilot (12/2025 – Present): A natural language personal assistant service for daily task management.

- Standalone service spun off from LearningDB; uses MCP tools from LearningDB for habit and personal data access.
- Built with LangChain to orchestrate conversational workflows for day-to-day planning and task management.
- GitHub: *link forthcoming*

TiLearn (7/2024 – Present): An open-source data science platform for task priority and duration prediction.

- Used time-series, work, and personal data to train ML models that predict and rank task priority and estimated execution time.
- Built a Python library and open-source platform for integrating predictions into time-management workflows.
- Supervisors: Dr. Lê Minh Huy (VLU), Dr. Trần Thanh Hiệp (HCMUT)
- PyPI

- GitHub

LearningDB (6/2024 – Present): A tracking system for habit data and machine learning pipelines.

- Built a habit-tracking system to collect structured personal data and run ML models for data mining.
- Docker Hub: *link forthcoming*
- GitHub: *link forthcoming*

COMPETITIONS

ROGII Wellbore Geology Prediction (5/2026 – Present): Kaggle competition on geosteering and subsurface geology prediction.

- Predicted true vertical thickness (TVT) along horizontal wellbores from gamma-ray logs and XYZ trajectory data.
- Built an ML regression pipeline with feature engineering from horizontal-typewell log alignment and trajectory signals; evaluated with RMSE.
- Kaggle Competition
- Kaggle Notebook: *link forthcoming*

Methods for Integer Linear Programming Problems (8/2023 – 5/2024): University-level scientific research project at Saigon University (SGU), Vietnam.

- Researched Branch and Bound and Gomory methods for integer linear programming and built a Python library implementing the algorithms.
- Grade: Excellent.
- Supervisor: Assoc. Prof. Dr. Tạ Quang Sơn

VOLUNTEERS

Reading Performance (7/2025 – Present): A personal system to collect essential life data.

- Developed a system for collecting and analyzing personal data.
- Reading performance dataset with demographic and contextual factors reached 40+ upvotes, 1,500 downloads, 5,500 views, and numerous analyses.
- Kaggle
- Hugging Face

EDUCATION

Saigon University, Ho Chi Minh City

Bachelor's in Applied Mathematics and Computer Science, 2022 – 2026

LANGUAGE PROFICIENCY

VSTEP — Overall: B2 (CEFR B2), 2026

STRENGTHS

Soft skills: Hard-working, Fast adaptability, Rapid reading, deep comprehension, Motivator & Leader.

AI/ML: AI, ML/DL, Data Analysis.

Programming: C/C++, Python, FastAPI, PyTorch, TensorFlow, ...

Domain: Optimization, Statistical, Operations Research.
